

WHERE THE MIND MEETS THE MAP:

Stroke and Dementia in Ohio's Overlooked Communities

LEARNING OBJECTIVES:

- ❑ Identify how Alzheimer's disease and related dementias (ADRD) and stroke prevalence differ across Appalachian vs. non-Appalachian and rural vs. urban counties in Ohio.
- ❑ Examine how disparities in access to diagnostic services—such as primary care, neurology visits, and imaging—affect the detection and reported prevalence of ADRD.
- ❑ Explore the need for improved diagnostic access and service delivery in high-burden areas.
